

# VersaVIEW-CD™ and VersaVIEW™ VersaIMAGE™ viewers

**VersaVIEW™** software is for users who receive **VersaIMAGE™** CDs frequently from the same originating source (i.e. a Service Bureau). In that case it is cost effective to install **VersaVIEW** software at the user's workstation or network. The low cost viewer allows the registration and viewing of standard **VersaIMAGE** CDs that contain index information and Tiff images, eliminating the need for viewing software to be included on each CD (please see VersaVIEW-CD below). Each CD received is registered by the system which copies the .csv index file and merges it with the main index file on the workstation's hard drive or the network drive. Information research requests yield operator notification as to which CD must be inserted in order to view the desired Tiff images.

In summary, **VersaVIEW** is an image viewer that expands the capability of all VersaIMAGE products to users at remote sites and is ideal for distribution by imaging Service Bureaus. It allows end users to view, print, email or fax images via the VersaView using standard, royalty free CDs created by VersaIMAGE. Newly registered CDs automatically update the main index file on the computer's hard drive.

**The VersaVIEW-CD™ Software** is a 32 bit Microsoft Windows based Tiff image viewer that is distributed on a CD together with the (.csv) index information and Tiff images. Both VersaIMAGE indexing and digital Tiff images may be retrieved from these CDs and viewed with the "on-board" VersaVIEW-CD program. The VersaVIEW-CD viewer installs from the CD onto any 32 bit Windows 95/98, ME, NT, 2000 and XP computer system. VersaView CD requires purchase of the viewer license for each CD. The licenses come in 50 and 500 license packages. Users are required to keep track of licenses used and pay royalties accordingly.

## VersaVIEW-PDF-CD™

This viewer is for VersaIMAGE users that would like to distribute CDs with image and index files in PDF format using the universal Acrobat viewer. VersaVIEW-PDF-CD can only be created with **VersaIMAGE-GOLD** products.
